# ❯ Kairos LS

Automate and optimise your bodywork flows

Increased productivity

Reduced waiting times for workshop appointments

Autonomous workshop booking at the reception

Reception staff can arrange the ideal appointment date with reliable commitments for when the vehicle will be returned, and improve distribution of appointments across the week.

Anticipation and live management of your planning with alerts based on delays and promised return time.

The task allocation system automatically assigns the operations to be carried out based on the skills and availability of each technician and each workstation.

Manage your own priorities and automatically update the impact on the rest of your workload.

Optimised system for rotating and allocating courtesy vehicles.

Interface available with your current system (DMS or third party software) for a complete solution and scalable custom ecosystem to avoid duplicate data entry.
